*One Step Closer to....
Printable & Flexible
Electronics*

Using an Advanced Screen Printing Process allows us to generate EL characters and EL figures on flexible substrates per your requirements. DKN Research can assist in designing flexible light sources with suitable power sources.

- The three colors available (blue, green and pink) can be printed on the same panel.
- The smallest EL dot size is 0.5 mm square, and the standard screen printing process is capable to produce 300 mm x 400 mm panel sizes.
- Double sided adhesive tape can be applied to the backside of the panel so it can hang from flat walls, or columns.

Feel free to contact DKN Research for more information.
